## EXTENDS THE BOUNDARIES OF LEAK DETECTION!

This machine offers – Leading edge technology  
Traveling Head Leak Testers

- Ultra high speed leak detection
- Value for money
- Can test on a 3 head m/c around 18,600 x 240ml bottles per hour or 8,500-10,000 x 1L. Machines from our competitors cannot test this many bottles per test head, so you will have less test heads on our machines.
- Can have up to 6 heads (could test around 31,000 bottles per hour for a 240 ml or even faster for smaller bottles). Can also be supplied in tandem or double row.
- Or if higher rates are needed - have two travelling heads working in parallel for rates almost double a single row.
- Design can be adapted for bottles up to 3L , other sizes on request.
- **Several styles to suit your bottle type and test rates.**

This range has an attractive capital cost for the required test rate. Much less expensive than a rotary leak tester.

Bringing you the latest & best in leak detection technology.
